For this project, assume the role of a professional consultant hired by the Board of Directors and Executive Management Team. Choose any company that you want (only work with others in your group) and prepare a risk management assessment that consists of the following components. First, perform an analysis of the Board of Directors, Committee Charters, and Executive Team composition, noting strengths and suggestions for improvement. Second, determine what you believe are the overall business objectives of the firm and the strategies put in place to achieve them. Based on this information, infer what you believe is the risk appetite of the organization and describe if believe that the appetite is in line with the appetites of key stakeholders. Third, identify the primary risks facing the organization that threaten its strategies and assess their significance. Fourth, suggest how Executive Management can utilize strategic-level controls to manage the risks, regardless of whether you believe that these controls actually are in place at the organization—there is high variance in the transparency with which organizations report strategic-level controls (e.g., beliefs, boundaries, diagnostic, and interactive control systems).

Your report is due on Tuesday, October 24. In addition, attach a PowerPoint presentation that you would use to present your findings to the Board and Executives.

There is no set limit on the format or length of this report. Remember that you are selling your ideas to very busy executives, so you want to balance style, content, and conciseness. Also, you are giving your final report to customer, so it should be customer ready. Also, The PowerPoint presentation should not be a reproduction of all of the details in your report. Its purpose is to motivate the Executives and BOD to read the full report.
